Animals will be transferred to the buyer at the seller's expense. Each buyer must be sure to give the sale clerk proper name and address for making transfers.

TRUCKING:

Reputable truckers will be available to assist with your purchases. Let us know if you need assistance with your trucking needs.

PERFORMANCE INFORMATION & GENOMIC ENHANCE EPDS:

All bulls have Genomic Enhanced EPDs.
All bulls were DNA tested with AngusGS.
For more information please contact the ranch.
All EPD's current as of 9/19/2025.

SMITH BREEDING GUARANTEE:

Smith Registered Angus provides a first breeding season guarantee on all bulls selling. The breeding season is defined as the 90 day period following bull turnout. We will provide you a satisfactory replacement or issue a credit for a future sale equal to the purchase price minus salvage value. Smith Registered Angus Ranch reserves the right to deal with any problem individually.

INSPECTIONS OF THE CATTLE:

You are invited to inspect the cattle at the ranch anytime.

SMITH REGISTERED ANGUS RANCH HERD HEALTH:

All bulls selling have passed a semen evaluation by Zack Dombeck, Berryville Vet Clinic (636) 222-2437. Individual health papers will be provided for shipment anywhere.

NOTES:

Supplemental breeding and pregnancy testing information will be available sale day. Announcements made from the auction block will take precedence over the sale book. All persons attending the sale do so at their own risk. Neither the owners, nor the sale staff assume liability, legal or otherwise for accidents or loss of property.

Smith Registered Angus Ranch would like to welcome everyone to our 10th Annual Production Sale!

At Smith Angus Ranch, we have a strong belief in the values of faith, family, hard work and personal responsibility. Those values are the cornerstone of our business and drive us to continuously improve. All of us are in a noble profession of providing high quality protein to the world.

Again this year we will be having the sale at the farm south of Berryville. The cattle will be penned the afternoon before the sale and can be viewed anytime on pasture by appointment. TV's will be set up in the tent with videos of the cattle during the sale.

Disciplined balanced-trait selection has allowed us to make great strides in our breeding program to provide genetics that will help our customers be successful in the cattle business. The cattle industry is seeing record high prices with strong consumer demand for high quality beef. With the input and environmental challenges we see in the cattle business those rewards are most welcome. Now is the time to invest in genetics that will keep that momentum going. We will be offering females from the heart of our herd with years of production ahead of them.

The bulls are developed on pasture and hand fed daily. They are sound, good footed and gentle. Herd health and fertility checks have been done by Berryville Vet Clinic.

We cherish the strong relationships with our friends and customers. We always strive to do the right thing, for the right reason, in the right way. Please contact us with any questions and let us know if we can assist you in selecting the right genetics for your herd.

Thank you for your interest in Smith Registered Angus Ranch.

Sincerely,

The Smith Family

DEDICATED. COMMITTED.

WHOLE HERD REPORTING WITH MATERNALPLUS®

Raising quality registered Angus cattle takes **COMMITMENT.**

As your genetic supplier, we are **DEDICATED** to not only improve today's genetics, but also prepare for the future of the Angus breed. We believe a commitment to improvement starts with the female.

Commit to the female — commit to MaternalPlus®.

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

American Angus Association \$Value Indexes

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase weaning and maternal milk traits while also continuing to increase mature cow size.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.
